

IKEA Restaurant, Alexandra – Singapore

Swedish Restaurant

Installer and General Contractor:

Entrust Organisation Pte Ltd

Featured Products:

- ARDEX K 310 Self-smoothing compound as underlayment
- ARDEX AF 190 Premium Multipurpose Flooring Adhesive

Challenges:

ARDEX was chosen for the whole vinyl installation work for the prestigious IKEA Restaurant at Alexandra, Singapore. The area is approximately 2,000m². Environmentally-friendly, sustainable building products with Green Label certification were required. The competition with other suppliers was strong.

Problem:

IKEA is a multinational group that designs and sells ready to assemble furniture, kitchen appliances and home accessories. The IKEA Restaurant has your appetite taken care of, at equality appetizing prices. The flooring installation work was done in two phases and completed in May 2017. The applicators were required to complete the project in a short time frame that allowed only two weeks for both removing the existing vinyl and to install the new floor covering. Night work was carried out in order to avoid affecting the restaurant's daily operations and to meet the time frame as requested from the customer.

Solution:

ARDEX managed to secure the project by introducing its unique Flooring System, both products are certified with the Singapore Green Label: ARDEX K 310 is a rapid-setting compound used to prepare interior floors prior to laying the vinyl covering, and ARDEX AF 190 is a water-based, solvent-free, adhesive for permanent internal vinyl installations.
